This text emphasizes the role of cognitive, vicarious, self-regulatory, and self-reflective processes in psychosocial functioning. It also highlights reciprocal causation through interplay of cognitive, behavioral, and environmental factors. Craig K Ewart (1991) Psychology The American Psychologist A social theory of personal action provides an integrative framework for applying psychology to public health. This work discloses gaps in current understanding of self-regulation and generates guidelines for improving health promotion at population level. Samuel Winer et al. (2010) Social-cognitive and dialogical perspectives are two primary ways of conceptualizing persons in contemporary psychology. The present paper advances a dialogue between these perspectives by highlighting commonalities and differences. J Vancouver et al. (2018) This article presents a social-cognitive theory of personality assessment. It articulates the implications of social-cognitive theories of personality for what constitutes an ideal personality assessment. Christina Lee (1993) Modern cognitive-behavioural therapies assume that cognition is central to human behaviour. They also assume that the assessment of cognitive variables through self-report is a valid method. R Schwarzer et al. (1996) Self-referent thought has become an issue in psychological research. In 1977, Albert Bandura introduced the concept of self-referent thought at Stanford University. Brian G Whitaker et al. (2013) As corporate scandals proliferate, organizational researchers and practitioners have called for research providing guidance on positive moral decision-making. This work aims to address this call by influencing positive moral decision-making and improving ethics in organizations. Albert Bandura (1925-) is the founder of Social Learning Theory (SLT), which he renamed Social Cognitive Theory (SCT). The theory attempts to explain human motivation and action through social cognitive processes. SCT emphasizes learning through direct experience, encompassing observation, imitation, and modeling. This process enables individuals to acquire behavioral codes, which may or may not be executed in the future. Model behavior is a crucial aspect of SCT, involving the observation and replication of others' actions.
